

Tips for making parts that push/snap together  
Why does my PLA filament keep snapping?  
Are self intersecting meshes dirty from a 3D printing perspective?  
Snapping to Ground - 123D Design  
Ender 3 destroyed itself... HELP!  
What is this called and how do I avoid it? (model frees itself from support structure and warps upwards)  
Self-lubricating 3D printable materials for space  
Why did my printer's nozzle dig itself into my print?  
What are the pros and cons of collecting parts yourself, versus getting a DIY kit and then modifying it?  
Clogging from heat creep, but only in the nozzle itself?  
While filament loading extruded filament wiggles  
Can snap-fit connector be designed for 3D Printing?  
how to get infill on self created stl via onshapes  
Strange walls/faces when importing self made model from Blender to Cura 3  
Can you snap fit 3D resin printed parts?  
Graphite self-lubricating bushings performance?  
Thin bead not adhering to itself or bed very well, what am I doing wrong  
Cantilever snap-fits print axis  
Feasible 3D Printed Snap Connectors  
Do Cura's self-crossing infill patterns account for excess material from self-crossing?  
Custom Infill Pattern Based on Self-Generated Geometry  
How many times printed printer can print it-self?  
What kind of problem is this? How does it correct itself?  
Nozzle jiggles when screwing into heating block  
Printing a non-self-aligning caged deep-groove ball bearing  
Snap-in clamp geometry  
Fusion 360 + Snapmaker original for printing  
How does a 3D printer print itself given the huge size?  
Is 3D printing suitable for repairing a refrigerator shelf glide rail?  
Extruder motor wiggling  
Accidentally printed a chocolate mold instead of the object itself  
Path of a nozzle crosses over itself  
Where to get smartphone shapes from, to create a case all by myself?  
3D printer restarts itself  
Can the total runtime of an ender 5 be determined from the printer itself?  
What material can withstand riveting or the compression of self-tapping screws?  
Tips for making parts that push/snap together  
Why does my PLA filament keep snapping?  
Are self intersecting meshes dirty from a 3D printing perspective?  
Snapping to Ground - 123D Design  
Ender 3 destroyed itself... HELP!  
What is this called and how do I avoid it? (model frees itself from support structure and warps upwards)  
Self-lubricating 3D printable materials for space  
Why did my printer's nozzle dig itself into my print?

**What are the pros and cons of collecting parts yourself, versus getting a DIY kit and then modifying it?**
